

GROUPWORK EVIDENCE

Meeting Minutes – Airplane Crashes Data Cleaning

ICS 3202 – Artificial Intelligence

Assignment	Airplane Crashes Data Cleaning
Repository	Data-Wrangling
Notebook	Airplane_Crashes_Data_Cleaning.ipynb
Meeting Date	18/09/2026
Meeting Mode	Online

1. Purpose of the Meeting

The purpose of the group meeting was to work collaboratively on the ICS 3202 Artificial Intelligence practical exercise on data cleaning using the Airplane Crashes dataset. The group discussed the assignment requirements, divided tasks, worked on the Python/Google Colab notebook, checked the results, and prepared the work for submission to GitHub.

2. Attendance

The following members participated in the groupwork.

No.	Member Name	ID	GitHub Username
1	Shekinah Gloria	182989	ShekinahGloria
2	Flaviour Muiga	174961	Kaylabiwott
3	Kayla Biwott	190382	Flaviourr

3. Agenda / Activities

- Review the Airplane Crashes dataset and assignment requirements.
- Load the dataset into Google Colab using pandas.
- Determine the number of rows and columns.
- Display the last 75 rows of the dataset.
- Identify missing values and discuss suitable treatments for each column.
- Create the fatality_locations dataframe with Date, Location, Aboard, and Fatalities.
- Determine the date with the highest recorded number of fatalities.
- Compare people aboard with fatalities and identify crashes with zero fatalities.
- Split Location into Region and State/Country.
- Sort the data by fatalities and select the top 100 records.
- Generate the pie chart for the top 25 fatalities by State/Country.
- Review the notebook and prepare the GitHub repository and groupwork evidence.

4. Work Completed

During the meeting, the group members worked on the practical exercise in Google Colab. The notebook was completed through Questions 1–10, including data inspection, missing-data analysis, creation of the required dataframe, comparison of aboard and fatalities, location splitting, sorting, and visualization.

The group also discussed the required GitHub submission structure. The original repository is to be named Data-Wrangling and set to public so that participating group members can fork it.

5. Division of Responsibilities

Member	Contribution	Status
Flaviour Muiga	Q1-Q3, Word Document	Completed
Kayla Biwott	Q4-Q6, Word Document	Completed
Shekinah Gloria	Q7-Q10, GIT-HUB	Completed

6. Evidence of Groupwork

Assigning the tasks

Online discussion (Flaviour and Shekky)

Artificial Intelligence

Kay, Kayla, You

Kayla

Hey guys, I won't be able to make it for the group meeting tonight. Something has come up at home that I need to sort out, so I'll have to miss the discussion. Just keep me updated on what you guys agree on and let me know if there's anything I need to handle afterwards.
i'm sorry 💕💕

Today

22:57

Guys, for Q4–Q7 this is basically what we did:

Q4 – Missing data:
We first checked how many missing values each column has using `isnull().sum()`. Then we decided how each type of missing data should be handled. For example, for categorical columns like Time, Location, Operator and Route, we can use the mode or label them as "Unknown". For numerical columns like Aboard and Fatalities, we can use the median because it isn't affected as much by extreme values. For things like Flight # and Registration, we use "Unknown" because they are identifiers, so taking an average wouldn't make sense. We also gave a justification for each treatment.

Q5 – Creating the new dataframe:
We created a new dataframe called `fatality_locations` from the original dataset. We only selected the four columns the question asked for: Date, Location, Aboard and Fatalities. This gives us a smaller dataframe that we can use for the remaining questions.

Q6 – Highest fatalities:

More Discussion(Kayla's participation)

7. Conclusion

The group completed the required data-cleaning practical exercise and reviewed the notebook for completeness. The members agreed to upload the notebook and this groupwork evidence to the Data-Wrangling GitHub repository and to ensure that each member who participated forks the original repository as required.
